Date: 18 September 2026

To: Istanbul Technical University
Faculty of Electrical and Electronics Engineering
Department of Electrical Engineering
Istanbul, Türkiye

INTERNSHIP ACCEPTANCE AND COMPLETION CERTIFICATE

TO WHOM IT MAY CONCERN

We hereby confirm that the person named below was accepted as an intern by Youtune Technology Co., Ltd. (浙江禹调科技有限公司) and completed his internship in our office under our supervision, on the terms set out in this certificate.

1. Intern

Full name	Mustafa Emre ÇEKMİŞ
Nationality	Republic of Türkiye
Passport number	U36458484
Home university	Istanbul Technical University, Istanbul, Türkiye
Faculty / Department	Faculty of Electrical and Electronics Engineering / Department of Electrical Engineering
Student number	040230114

2. Internship period

Start date	6 July 2026 (Monday)
End date	18 September 2026 (Friday)
Working days	Monday to Friday (weekends off)
Total working days	55 working days
Daily working hours	09:00 – 18:00, including a one-hour lunch break
Weekly working hours	40 hours

The intern attended the workplace in person on the working days stated above. The number of working days above corresponds to the number of daily pages in the internship report submitted by the intern.

3. Place of the internship

The internship was carried out at the office of Youtune Technology Co., Ltd. at Room 701, Building No. 2, Zhejiang University Ningbo Campus (Ningbo Innovation Center), Ningbo, Zhejiang Province, P. R. China.

The company was established in May 2025 and works on software–hardware co-optimisation, AI data products and edge computing. Its technical work builds on the System Performance Analytics and

Intelligence Laboratory (SPAIL) of Zhejiang University. It was founded by Prof. Kingsum Chow, a faculty member of Zhejiang University, and hosts students for research and internship activities carried out together with university faculty members.

4. Supervision

Prof. Kingsum Chow – Zhejiang University; founder of Youtune Technology Co., Ltd.; responsible for the internship programme carried out in this office.

Prof. Tony Wu – Zhejiang University; direct technical supervisor of the intern's project. The intern reported to Prof. Tony Wu in a weekly progress meeting and a written weekly report throughout the internship.

5. Scope of the work carried out

The intern's work was based on electrical installation standards and equipment documentation: OSHA 29 CFR 1910.303 (general requirements), 29 CFR 1910.304 (wiring design and protection), and a motor equipment manual. He built a system that answers technical questions on these documents fully offline, on resource-constrained hardware, in line with the company's work on edge computing. His work covered, in particular:

- The electrical subject matter handled by the system: overcurrent protection ratios, motor branch-circuit protective device selection, conductor sizing, grounding conditions, receptacle load tables and working-space clearance requirements around live equipment. He built a technical test set from these topics and used it to measure the system.
- Design and implementation of the system: document retrieval over the electrical documents, and a semantic cache that serves an equivalent question from a stored answer instead of re-running the model. All inference ran on the CPU only, with GPU acceleration deliberately excluded to match the limited industrial and edge hardware targeted.
- A safeguard specific to electrical content: questions that differ only in a rated value, such as 15 A against 30 A or 3 kW against 7 kW, look almost identical to a language model but have different correct answers and call for different protective devices. He added a check that prevents such a question from being answered with a stored answer belonging to a different rating.
- Analysis of the system's wrong answers: he traced each failure to either the document retrieval or the language model, and documented the error types that matter most for electrical decision support – in particular answers that read as correct because they quote a real value from the right document, but from the paragraph covering a different rating or voltage class.
- Measurement and reporting: answer accuracy, response time, retrieval time, inference time and cache hit rate, measured over repeated benchmark runs; a weekly written progress report and a monthly technical report in English, discussed with the supervisor.

6. Remuneration

The company paid the intern a monthly allowance of 4,000 CNY before tax, on the 24th day of each month, for the duration of the internship.

7. Conduct and performance

The intern attended regularly and punctually, carried out the tasks assigned to him satisfactorily, and completed the internship successfully. The daily pages of his internship report have been reviewed by us and reflect the work he actually performed.

8. Verification

Issued at the request of the intern for submission to Istanbul Technical University. Queries may be addressed to Prof. Kingsum Chow, founder, at zhoujingsen@youtune.tech / +86-198-84177147.

Internship Acceptance and Completion Certificate – Mustafa Emre ÇEKMiŞ (student no. 040230114)

Internship period: 6 July 2026 – 18 September 2026, Youtune Technology Co., Ltd., Ningbo, P. R. China.
